SUMMARY

I'm at the beginning of my IT-journey. Even though I have 8 years of management experience, I decided to switch my working sphere and move to IT from construction industry. Therefore, I started learning HTML, CSS, JS and React.js. I've learned chosen specialization hard and diligent. I always did more and dug deeper on each theme. Due to that I'm sure I can confidently and successfully evolve myself at Frontend development. My previous work experience will help me to keep calm, to look at tasks wider, to implement it responsibly and in good faith, to hear colleagues, mentors and clients. I'm highly motivated to succeed in a new sphere for me, therefore I'm ready to walk an extra mile to achieve my goals.
